

33. The more developed parts, the more dependent on each other
- 54 All organs require occasional use to keep perfect
- 76 Jimmy Dops on being a blind female left heart, born at earlier period
- 165 Branchial arches in higher animals - p 302, 320
- 290 On sameness of attracting same substances, as in humans (Panthers)
- 395 Peculiar cells in Ornithoptera, that color & whole
- 399 On similarity of embryos of higher animals
- 403 On membranes in relation to division of germ - Double membrane
499. On sucking objects to human idea of Dream for infant (h.d.)
- 686 On the insulation of the body to certain muscles in playing piano (h.d.)
- 713 Reflex action, compared by me with Habit - 718 reflexes adapted - 721 (h.d.)
- 791 On atrophy of nerve of eye for vision

Owen says he can perceive not
much difference between reflex action &
effect of habit - (he conceives an
habitual action takes place through spinal
cords)
404. M. Givens &
Clarville

It seems to me most difficult to separate
a truly habitual (if such there be) &
hereditary habit - from real mental
willed actions, which the consciousness
does not perceive from want of attention,
in same manner as I do not
perceive all constantness impressions
on the senses -

Associations may become hereditary, which
w^d account for the alliance of instincts
with times, places, &c. V. Hartley on Association??

has then can Geologists say, that animals were first created !!!
 a capital argument, showing that we must not presently
 from absence of organic remains. p. 46
